

iServer Live Documents

Easily build process and architecture documentation in minutes, within the familiar Microsoft Word environment.

Features

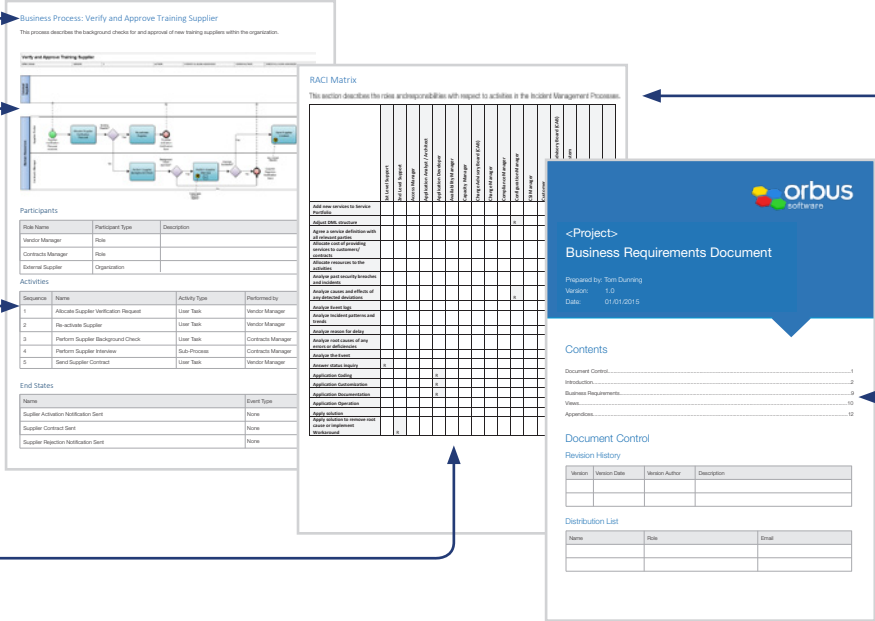

- Build Live Documents with embedded “smart components” including diagrams, object or relationship catalogs and relationship matrices
- Documents can be refreshed, updating components automatically as content in the repository changes.
- Re-usable blueprints (templates) can be built for common document types (eg. BRD, SAD) that enable modeling teams to instantly generate project documentation
- Out of the box blueprints (templates) are provided for common documentation types and views.

Benefits

- Huge reduction in the manual effort spent building or updating documentation
- Increased accuracy of documentation
- Consistency and standardization in documentation templates
- Non-technical end users can build documents and document templates with no report development required

Example of a Live Document

Business Requirements Document (BRD)

Business Process or Architecture diagrams and meta-data such as titles, descriptions or attributes

Free text paragraphs

Tables of objects (requirements, systems or business rules) or relationships from the model

Re-use and extend existing document templates and branding

Insert views such as matrices or hierarchies

Architects and Business Analysts spend a huge amount of time building architecture and business process documentation. Often, this involves the manual copy and paste of Visio diagrams and tables into Microsoft Word. In addition, with diagrams, objects and relationships changing in the repository all the time, documents quickly become out of date, once again calling for the slow manual effort to update everything, or else submit inaccurate documentation.

stored in the iServer Repository. The documents can be easily kept up to date through a single-click refresh option. iServer Live Documents enables governed document creation, ensuring terminology, structure, and meta-model usage are consistent across all deliverables, while also allowing teams to instantly generate project documentation without the usual amount of manual effort.

iServer Live Documents makes building documentation quick and painless. Business users can quickly build smart documents within the familiar Microsoft Word environment, reusing source content
