

iServer BPM Connect

Export BPMN 2.0 process models in the industry standard BPMN2 XML format from iServer into a variety of compatible third party Business Process Management Suites (BPMS) or workflow tools.

Features

- Allows users to export multiple diagrams from within the iServer repository ensuring only BPMN 2.0 compliant diagrams are added to the export list.
- Allows users to export BPMN 2.0 compliant diagrams stored on their local computer.
- Enables users to map and relate process hierarchies, intermediate events and processes that span across multiple diagrams
- Save standard XML files for import into a variety of compatible third party business process management suites (BPMS) and workflow systems.

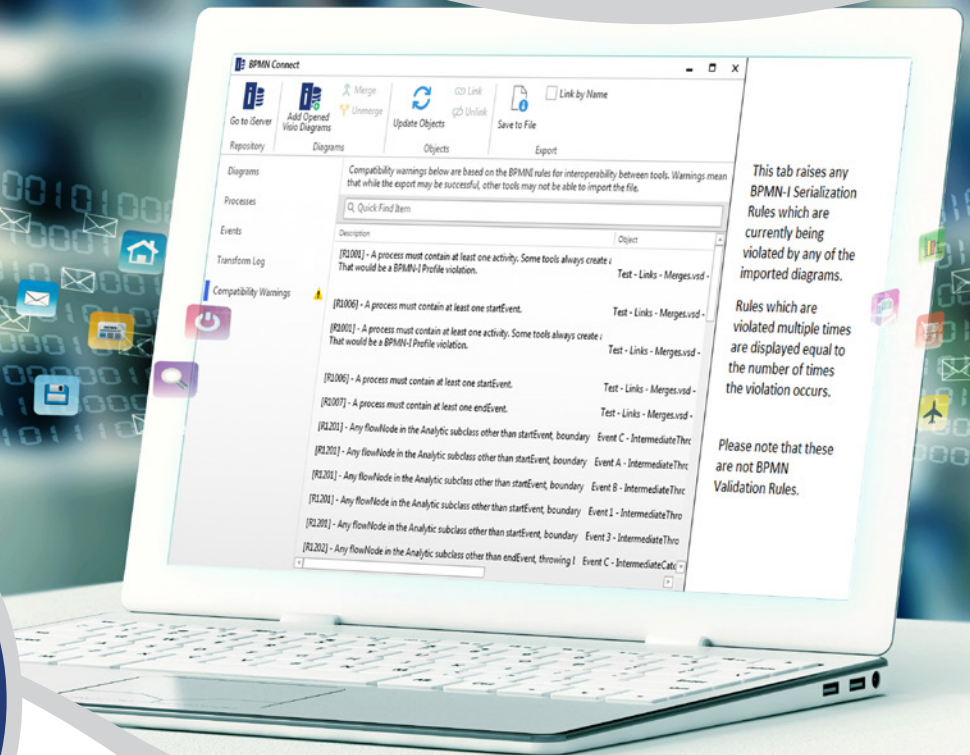

Benefits

- Easy export of iServer and non-iServer BPMN 2.0 Diagrams
- Industry standard BPMN2 XML export file format
- Largely compatible export format
- Easy integration of iServer processes with third party tools
- Load your iServer business processes directly into your compatible workflow tool

iServer product suite

Once business processes have been modeled in iServer, organizations need an industry standard and compatible way of exporting the processes so they can be implemented and operationalized in the organization. Implementing business processes may involve exporting them to workflow systems or other operational process based systems. Organizations may also need to export business processes modeled

and captured in iServer to other specialist Business Process Management Suites (BPMS).

BPM Connect allows users to export BPMN 2.0 compliant Visio based process diagrams from the iServer repository, as well as those stored on the local computer, to a standard XML data format. This XML data can then be consumed by other workflow and operational process based tools.

Orbus has a global reach which means we can serve and support customers in every major global region. Headquartered in London, UK, we also have regional offices in the USA, Australia and South Africa.
