iServer BI Connect

Connect your iServer repository to your existing Business Intelligence (BI) and Analytics tool to dynamically analyze and communicate data, enriching your organization's existing BI dashboards.

Features

- Connects the iServer repository to ODBC supporting BI Tools
- Provides web based access to repository content
- Provides dynamic access to repository content without requiring knowledge of the iServer interface
- Facilitates communication between iServer data and BI tools
- A stand-alone installation not requiring iServer to be installed

Benefits

- Create customizable dashboards of iServer data, allowing a broader group of stakeholders to dynamically analyze the repository.
- Easily aggregate repository content with a number of data sources within a single dash-boarding interface for a holistic view of the organization
- Bridge the gap between design and operations of systems and strategy
- Ensure business intelligence is enriched with iServer architecture, process and governance content

iServer BI Connect

BOOK A FREE DEMO

Sign up on **www.orbussoftware.com/demo** for a free demonstration of the iServer product suite

Senior level stakeholders are often unfamiliar with an organization's repository tool, and it can be hard to demonstrate how the data can relate to the wider business. Without the ability to communicate live data in an understandable way, data can remain inaccessible for the wider business, making stakeholder buy-in for architecture and projects difficult to obtain. Ad-hoc, up-to-date iServer reporting via familiar BI tools, taking the wider organization context into account, provides a very effective way of communicating to senior level stakeholders.

BI Connect allows organizations to leverage the iServer repository as an additional data source for their existing Business Intelligence toolset. This enables stakeholders to browse iServer data dynamically for data discovery and ad-hoc reporting, via configurable dashboards in the third party BI tool. As a result, there is an increased visibility of work within the organization, with the iServer repository tightly integrated with management information and reports.

orbus software

Orbus has a global reach which means we can serve and support customers in every major global region. Headquartered in London, UK, we also have regional offices in the USA, Australia and South Africa.
