

iServer Consultancy Services:

# BPMN in a Tool: From Theory to Practice

## What's Involved?

BPMN is the de facto standard for process modeling, and while formal training and certification provides a solid theoretical knowledge of the framework, recently certified practitioners have found themselves in a state of limbo, without the requisite hands-on experience.

This training looks at how BPMN is used in business process management, and give participants a platform from which they can tailor the standard to their own bespoke projects.

Although the course will assume knowledge of BPMN, no prior knowledge of, or experience working with, iServer is required. It follows a collaborative workshop format and takes place over a full day.

## Key Enterprise Architecture Team Benefits:

- Look critically and holistically at BPMN
- Understand how BPMN concepts translate from theory to practice
- Tailor and apply BPMN to real work, with full tool support

## Key Business Benefits:

- Look critically and holistically at BPMN
- Understand how BPMN concepts translate from theory to practice
- Tailor and apply BPMN to real work, with full tool support

## Overview:

### **BPMN in a Tool:** From

*Theory to Practice* will give you all the necessary skills to apply BPMN 2 in real life situations. This course from Orbus Software goes beyond a typical theoretical approach; it involves a hands-on interpretation and application of BPMN, within the context of an enterprise architecture tool – iServer.
