

iServer Consultancy Services:

Implementing ArchiMate in iServer

What's Involved?

This course, from Orbus Software, will teach you how to practically apply ArchiMate using an enterprise architecture tool – iServer. You will get hands-on experience, learn best practices and understand how to utilize core concepts.

The course teaches you to harness the concepts that support the description, analysis and visualization of relationships within and across different architecture domains.

The course is designed for experienced enterprise architecture professionals and requires the completion of ArchiMate 3 training / certification. It takes place over the course of a day and is in the format of a collaborative workshop.

Key Enterprise Architecture Team Benefits:

- Understand how ArchiMate concepts translate from theory to practice
- Get a “quick start” to modeling EA in iServer using ArchiMate
- Establish how ArchiMate should be tailored for the organization

Key Business Benefits:

- Accelerated time-to-value for the application of ArchiMate in the organization
- Ensure the EA practice has a pragmatic understanding of ArchiMate
- Reduced risk of investment expenditure on ArchiMate training

Overview:

Implementing ArchiMate in iServer

provides a “quick-start” full-day workshop, allowing users to quickly connect ArchiMate theory and training with practical modeling in iServer. Ultimately, the course is designed to ensure you’re comfortable implementing the ArchiMate standard in iServer.
