

iServer Consultancy Services:

Implementing Roadmaps in iServer

What's Involved?

This course provides the foundational knowledge required to understand the purpose of architectural roadmaps. You will gain insight into how they can be created within iServer and shared across the enterprise.

The course includes an in depth exploration of the fundamentals of roadmaps, providing both the knowledge required to implement roadmaps in iServer, and architectural domain examples. You will also get guidance on socializing the roadmap with the iServer product suite and the options available for customization.

The course takes place over one day and each module includes a practical exercise, allowing participants to get 'hands on' in creating architectural domains. Basic working knowledge of iServer and Microsoft Visio is necessary in order to undertake this course.

Key Enterprise Architecture Team Benefits:

- Improve communication and collaboration on roadmaps
- Identify risks
- Identify areas of improvement
- Identifying priorities

Key Business Benefits:

- Enable better resource and budget planning
- Ensure different domains are aligned to organizational strategy
- Gain detailed guidance on the required data structures to drive analysis
- Expedite the SPM solution time-to-value for IT

Overview:

The **Implementing Roadmaps in iServer** course provides an overview of iServer and its use in creating architectural roadmaps for the various enterprise architecture domains. You will learn how to overcome current enterprise architecture roadblocks and obstacles, ensuring that the organization can move forward with its transformational initiatives.
