

iServer for the Financial Services Sector

iServer is a leading Business Transformation platform that is used by hundreds of organizations around the world to translate their business strategy into actionable results and help them bridge the gaps between both business and IT.

iServer's seamless integration with the full Microsoft Office Suite, leveraging Visio as its modeling environment, and Office and Excel for document management makes it the easiest-to-use and the most widely adopted solution in the market. The platform's maturity, flexibility and stability enables it to be best fit choice for the financial services industry.

Benefits For Financial Services Organizations

Cut Costs

iServer's central repository provides visibility into how the business strategy is being realized through the use of existing business and IT capabilities. This visualization, leveraged by iServer's powerful Impact Analysis tool, helps financial institutions identify areas of improvement that require immediate attention and quickly define remediation actions. These remediation actions can then be grouped into projects, and prioritized by Portfolio Managers using iServer's road mapping tools, ensuring accurate investment allocation and eliminating program duplication.

Reduce Risk

iServer users have the option of having the solution deployed with a preconfigured repository for standards such as TOGAF, CMMI, or COBIT 5. This, coupled with the platform's governance features including approval workflows and limiting visibility based on permissions, means standards can be easily enforced and communicated to the wider enterprise or made available for audit purposes.

Minimize Complexity

Financial services organizations often have extremely complex environments that have evolved organically to include new systems alongside legacy ones. This information typically exists in ungoverned MS Office and Visio formats that span many sources and document versions. To solve all these challenges, iServer acts as a unique source of truth where information is easily accessible, searchable and always up to date.

Increase Organizational Agility

Technology is pushing all industries to innovate at an ever-increasing rate. Financial Service companies are witnessing major changes to the business strategies and technologies that are at the core of their growth, including Digitization, Big Data, and AI. To ensure these efforts create maximum value for your organization, iServer enables IT and business stakeholders to work more closely together in the pursuit of innovation and successful business transformation.

iServer MENA Finance Customers

Industry Frameworks & Standards

Finance is a highly regulated space. You need to be able to demonstrate compliance and also prevent any security breach that might cause severe financial and reputation losses. iServer offers a pre-configured repository and meta-model for a number of industry frameworks and standards including but not limited to:

CMMI
ACORD

BIAN
Basel III

MIRA-B
COSO ICIF

APQC PCF
FAIR

ISO standards
PCI DSS
