iServer for the Financial Services Sector

iServer is a leading software platform that is used by hundreds of organizations around the world to implement their business and IT transformation plans. iServer is a flexible, configurable tool that enables organizations to continue to use Microsoft Visio as their modeling environment. As well as providing a platform for collaboration, iServer provides seamless integration to the full Office Suite. The platform's maturity make it a solid choice for the financial services industry.

Benefits For Financial Services Organizations

Cut Costs

iServer's central repository provides visibility into how the business strategy interacts with the IT strategy and systems, allowing for better alignment between the two. By leveraging iServer's powerful Impact Analysis Visualization tool, the EA department can provide valuable insights to help decision making. What's more, thanks to the platform's road mapping tools, Portfolio Managers and Architects can prioritize areas of investment and ensure programs are not duplicated.

Reduce Risk

iServer users have the option of having the solution deployed with a preconfigured repository for standards such as TOGAF, CMMI, or COBIT 5. This, coupled with the platform's governance features including approval workflows and limiting visibility based on permissions, means standards can be easily enforced and communicated to the wider enterprise or made available for audit purposes.

Minimize Complexity

Financial services organizations often have extremely complex environments that have evolved organically to include new systems alongside legacy ones. This information typically exists in ungoverned MS Office and

Visio formats that span many sources and document versions. To solve all these challenges, iServer acts as a unique source of truth where information is easily accessible, searchable and always up to date.

Increase Organizational Agility

Technology is pushing all industries to innovate at an ever-increasing rate. Financial Service companies are witnessing major changes to the business strategies and technologies that are at the core of their growth, including Digitization, Big Data, and AI. To ensure these efforts create maximum value for your organization, iServer enables IT and business stakeholders to work more closely together in the pursuit of innovation and successful business transformation.
