

Information Portfolio Management

Ensure data is protected, compliant and accurate

Managing information is much more than managing data. It includes formulating access control, securing personally identifiable data or sensitive data, and understanding business needs for information.

Answer the fundamental questions with iServer's rich interactive dashboards

What sensitive or personally identifiable information is handled in my organization?

Which business services, departments or functions use data?

Who is responsible for different types of information, and how is it kept safe?

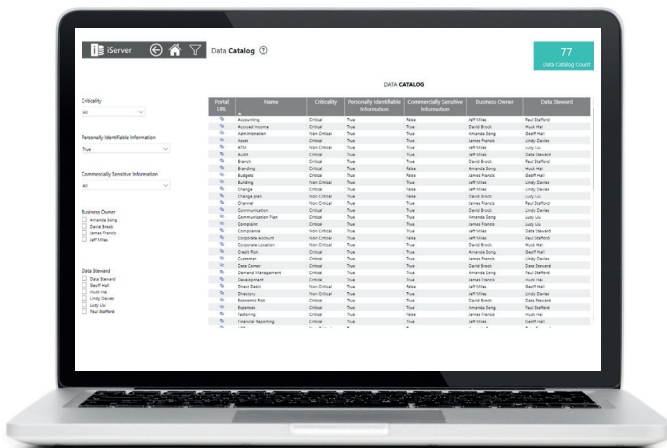

The SPM dashboards are driven by predefined views in the iServer repository and rendered in the most commonly used business intelligence tools, such as Microsoft's Power BI, Tableau or Qlik.

Information Portfolio Management

Essential dashboards for understanding information include:

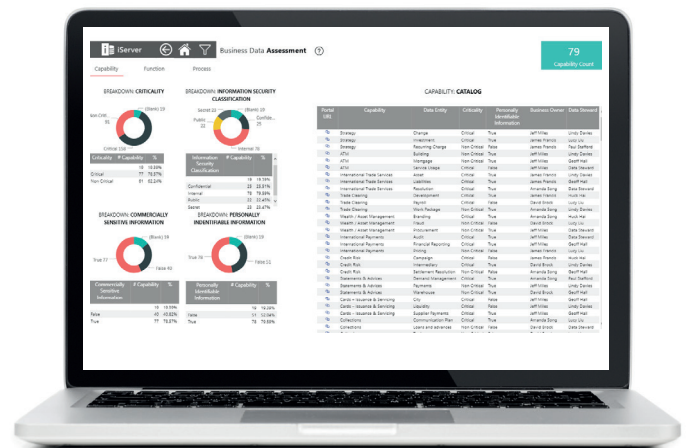

Data Catalog

A list of all business services with key information, including ownership, sensitivity, and criticality.

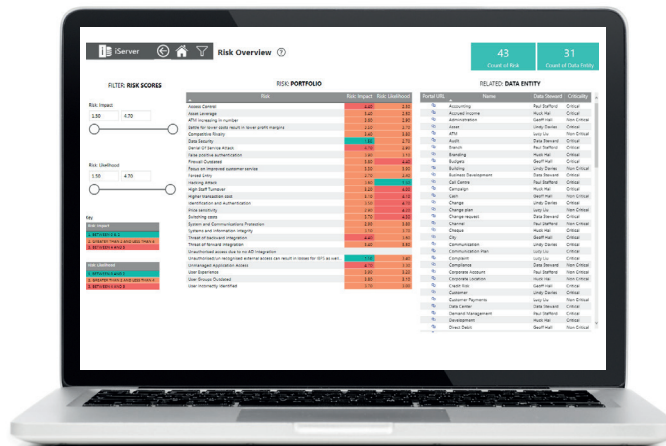

Business and Application Data Assessment

Reports that filter based on the security classification, criticality, and sensitivity of the data across applications or different business functions.

Information Risk Overview

Understand the impact of risks identified within your organization, linked to the data and its steward.
