# iServer Project Connect

Align projects, strategy and business goals using iServer Project Connect

Organization's undergoing digital transformation must leverage data from a range of sources, as they look to drive strategic alignment of the business and deliver faster, better quality projects.

iServer Project Connect, a bidirectional Microsoft Flow Connector, helps enterprises achieve their strategic goals by integrating the iServer Repository and Microsoft Project Online – or any other PPM and task management tool available in Microsoft Flow, including JIRA.

It enables the import, export and synchronization of project-related data and work packages in the iServer repository, and specific project-related metadata and details can be exchanged between Project Online and iServer. Through this

Project Impact Assessment

iServer Project Connect

alignment of project portfolios and the enterprise architecture repository, iServer Project Connect helps organizations deliver strategic goals.

iServer Project Connect enables integration throughout the entire project lifecycle. At the inception phase, iServer Project Connect enables the creation of flows that turn ideas into investments by translating top scored ideas from the Ideation App and iServer into project proposals in Project

Online. Then, for the selection phase, an alignment between projects from Project Online and the iServer repository enables comprehensive impact analysis and scenario analysis, ensuring the right portfolio – one that delivers the strategic goals of your organization – is prioritized. Project execution can also be synchronized through flows that ensure the latest status of your projects is reflected in the iServer project catalogue.
