

TOGAF Accelerator

Drive business value by bringing clarity and structure to your EA practice

Why the TOGAF Accelerator?

- Offers architects a solid, structured base onto which to build their architecture following industry best practices
- Reassures business stakeholders by promoting a larger ROI and a shorter Time to Value
- Supports management's enterprise transformation plans by fostering a structured, accountable and goal-driven approach to the change process

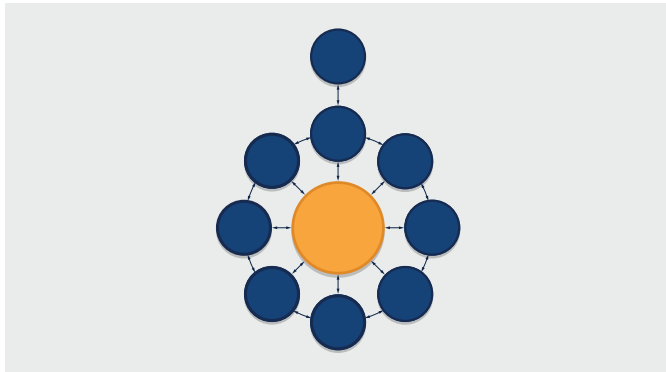

What Does it Offer?

The accelerator is a package containing all the tools required to implement TOGAF successfully. Instead of wasting time and resources building a TOGAF-aligned architecture from scratch, you can opt to receive iServer already aligned to the framework. This includes a TOGAF-aligned repository, meta-model, and documentation, together with a number of tools that enable you to experience business benefits immediately.

TOGAF Accelerator

Features

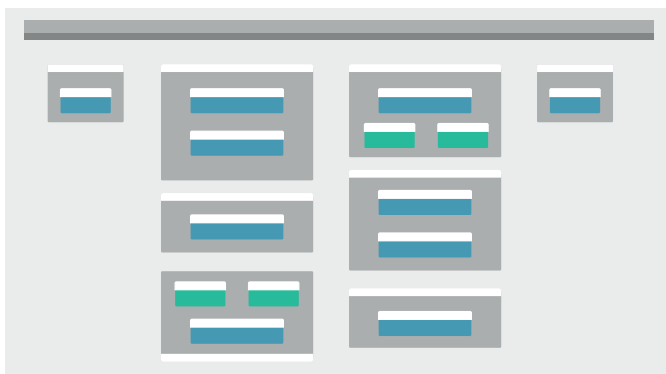

ADM-based Repository Structure

The iServer repository folder structure is aligned to the Architecture Development Method phases described by TOGAF.

TOGAF Meta-model

iServer comes preconfigured with the TOGAF meta-model and extensions, including all object and relationship types as well as the full set of metadata definitions.

Complete Set of Artifacts & Deliverables

A complete set of TOGAF viewpoints and views (available as MS Visio diagrams), TOGAF documentation (available as MS Word templates), and preconfigured TOGAF attributes.

Validation Rules Engine

Ensure all diagrams in the repository are TOGAF compliant.

Engaging Visio Visuals

Command your audience's attention and engage business users with attractive visuals.
