

iServer for Business Process Analysis

iServer provides a world-class central repository and familiar Microsoft environment for business and process analysts to model, store and analyze process diagrams. With out-of-the-box support for industry standards and business process improvement activities, iServer provides a collaborative platform to manage, visualize and deliver process improvement across the enterprise.

iServer's Powerful Modeling, Collaboration and Analysis Tools to Deliver Optimized Business Processes

Instantly import and re-use your existing Visio process models and supporting documents in Office formats.

Model and update your processes in the intuitive and familiar Visio environment.

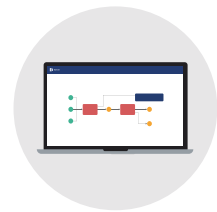

Leverage comprehensive support for the BPMN 2.0 modeling standard, including templates, stencils and diagram validation.

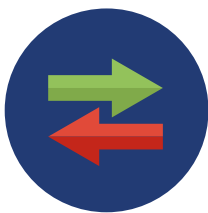

Utilize modeling assistance (fast draw) and validation reporting for BPMN 2.0 to ensure compliant diagrams.

Adopt Lean Process Optimization with a pre-configured repository built around the DMAIC process improvement methodology.

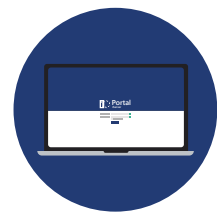

Integrate process reference models such as APQC, eTOM, eMMMV and many more.

Export process models for import and execution in Business Process Management Suites (BPMS) and ERP platforms.

Make process models available to unlimited browser viewers for enterprise wide review, validation and feedback.

Enable Process Owners and other business stakeholders to contribute directly to process models from within the web interface.
