Decision Analysis Tools

Business Architects
Are business capabilities delivering on our strategy?

Application Architects
What is the application architecture roadmap?

Technology Architects
Which technologies are not supporting business solutions?

Data Architects
Where is our sensitive data collected and processed?

Security Architects
Which are our biggest cybersecurity threats?

Solution Architects
How will my new solution impact other architectures?

Enterprise Architects
How do I generate and share a holistic view of the Enterprise Roadmap?

iServer for Enterprise Architecture

How is iServer different?

1

Continue to use Microsoft Applications

Architects continue to use existing content in their preferred tools - Visio and Office.

2

Easy to Use / Minimal Training

New users are up and running very quickly due to the familiar Visio modeling environment.

3

Highly Flexible / Configurable

Easy to customize – iServer can support any EA framework, meta-model or notation.

6

The Best Chance of Success

iServer's differentiators combine to increase the chances of a successful tool deployment.

5

Business-friendly Presentation Tools

Great looking visuals and dashboards, and a suite of outstanding communication modules.

4

Speed of Deployment

Up and running within a few days! iServer provides the fastest start to your EA project or initiative.

The widest range of EA Standards supported out of the box, including:

The Open Group OPEN Certified
TOGAF® 9 Tool

The Open Group OPEN Certified
ArchiMate® 3

FEAF ✓

UNIFIED MODELING LANGUAGE™ UML®

IT4IT

iServer for Enterprise Architecture

EA teams across the world use iServer capabilities to develop, manage and communicate their EA vision

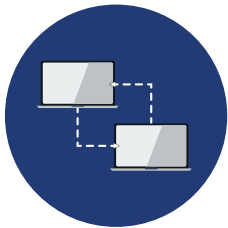

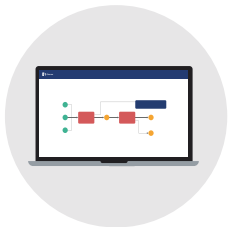

Instantly import and re-use your existing architecture models and objects in Visio and Office formats.
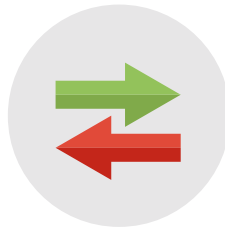

Import and synchronize data via REST API from CMDBs, or other modeling tools and systems, to enrich your EA repository content.

Model and update your architecture in the intuitive and familiar Visio environment.

Leverage pre-defined meta models for major standards such as TOGAF and ArchiMate accelerating adoption.

Full support for modeling notations such as ArchiMate 3 and UML 2.5.

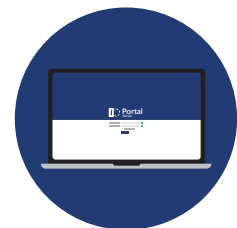

Modeling assistance (Fast Draw) and validation reporting for ArchiMate 3.

Publish architecture views, reports and dashboards out to key stakeholder and the wider business.

Make EA repository content available to unlimited browser viewers for enterprise-wide review, validation and feedback.

Enable Portal Contributors to contribute directly to EA repository content from within the web interface.
