

# APM Accelerator

Lower the cost and complexity of your application portfolio

## Why the APM Accelerator?

- Enables architects to simplify the application landscape, which lowers complexity and minimizes maintenance costs
- Facilitates the job of business stakeholders by reducing the number of applications they come in contact with and ensuring risks are better managed
- Gives management clear insight into the application compliance status and supports a vision of a more efficiently run organization

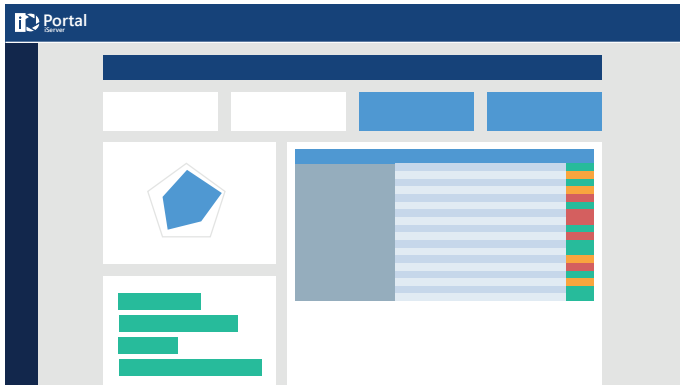

## What Does it Offer?

The APM Accelerator is a package containing all the tools required to successfully establish an application portfolio management practice. Instead of wasting time and resources starting an APM function from scratch, you can opt to receive iServer preconfigured to it. The accelerator includes a methodology for APM, useful templates, together with a number of tools that enable you to start application consolidation and IT-business alignment immediately.

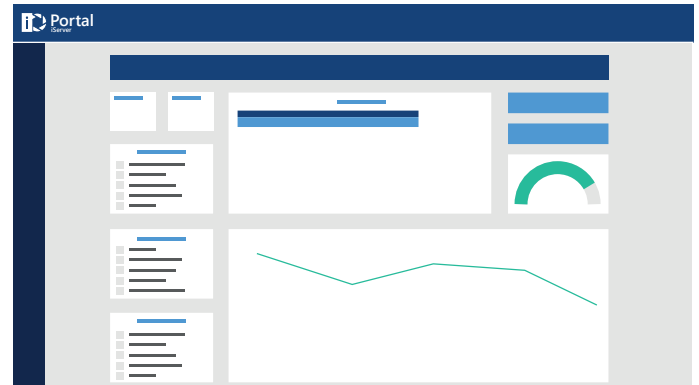

# APM Accelerator

## Features

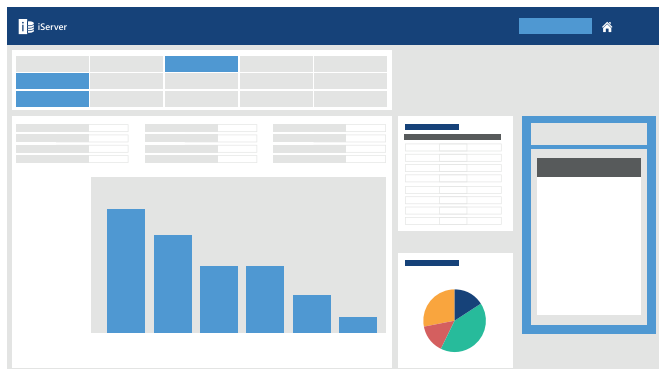

### APM Methodology

iServer is preconfigured to capture APM-specific metadata.

### Application Scoring Toolkit

Access to a toolkit for evaluating the business and technical suitability of applications.

### Enhanced Reporting & Views

iServer enables detailed reporting on the application portfolio via an extensive set of reports and views.

### Powerful Analysis Engine

iServer offers a wide range of analysis tools for scoring applications including bubble charts, heatmaps, roadmaps and dashboards.
