SharePoint Online

Empower people to inform and engage others across the company.

Save architectural content and artifacts on dedicated SharePoint sites, and utilise in-built version control functionality.

Increase collaboration by using different publishing formats, such as wikis.

Leverage web parts to make viewing and contributing to architectural outputs easier and more convenient for a wider range of stakeholders.

Use SharePoint lists to track:
• EA Governance
• Architecture Artifacts
• EA Metrics

Office 365

Leverage the world's number one productivity and collaboration suite to improve how you store and work on architectural artifacts and documentation.

Forms

Easily create surveys and polls to collect information from colleagues.

Capture and update information from colleagues across decentralized organizations.

Crowd-source information on applications and business processes.

Flows

Make repetitive tasks easy with workflow automation.

Automate common tasks such as sending forms, business approvals, reminders, and requests to stakeholders.

Visio

Shallow learning-curve diagramming tool that you can save into SharePoint.

Diagram in Visio to capture processes, and document relationships between objects in your model.
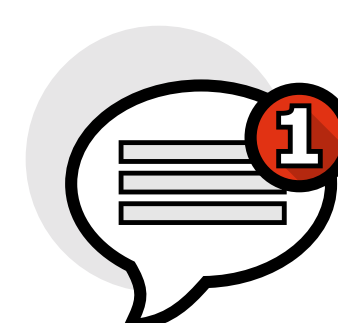

Save in SharePoint and make them available to relevant stakeholders.

Teams

Collaborate remotely on artifacts within Teams.

Engage and communicate effectively with your peers on your EA initiatives in the context of Teams Channels.

Visio diagrams - and other document formats - can be seen and edited during live group discussions.

Power BI

Dynamic data-driven visualizations.

Obtain powerful insights into your organisation and support decision making.

Professional, attractive visualizations that impress in meetings.
