iServer

Business and IT Transformation Suite

Capabilities

Successfully plan and execute strategic change from within the familiar Microsoft Visio environment

Framework Support

Enterprise Architecture

Facilitates collaborative modeling from a single source of truth. Diagrams are driven by data stored in the repository, while objects and their relationships can be re-used across multiple diagrams. Built around a fully customizable meta-model, the iServer EA repository ensures standards are enforced, leading to more consistent and accurate diagrams that can be easily communicated to stakeholders, including Architecture Roadmaps and heatmaps.

Business Process Analysis

Provides a central repository for business analysts to collaborate on business process models, acting as the storage point for process diagrams and associated documentation. It has a number of collaboration features, including role-based permissions and change management (versioning), and it can also be structured around the DMAIC Process for business process improvement.
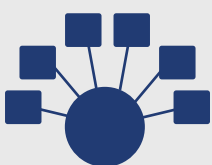

BPMN 2.0   Lean

Governance, Risk & Compliance

Helps organizations analyze, audit and manage their risk by bringing all risk analysis reports, information and documents into a central repository, allowing impact analysis and traceability reports to be conducted. The iServer GRC repository allows users to easily view the relationship between Enterprise or Corporate level goals and the IT-related goal, supporting traceability between business strategy and requirements, and IT implementation and projects.

IT Portfolio Management

Enables the inventory and management of application and technology portfolios in a single central location, capturing relevant information such as costs, lifecycle dates, ownership and health assessments. A set of pre-defined reports and dashboards enables the CIO, architects and other stakeholders to quickly digest the key statistics, and drill down into more information if desired.

APM

ERP Process Management

Provides an optimum modeling environment for teams to capture, share and validate ERP business process requirements and generate Business Blueprints for ERP implementations. With SAP Connect, iServer also offers seamless integration between the central repository and SAP Solution Manager.
