

Peab

Challenge

Peab is Sweden's largest, and a leading Nordic, construction and civil engineering company. Based in Sweden and with 15,000 employees and 52,000 shareholders, the organisation supports the end-to-end construction value chain. It prides itself on being the 'Nordic community builder', with the mission to improve everyday life where it is lived.

In an industry that was becoming increasingly digital, Peab's enterprise architecture (EA) team wanted a solution that would:

- support its continuing growth
- facilitate coordination in business development, digital development and governance
- establish common ways of working

Solution

Peab selected Orbus Software and OrbusInfinity due to their:

- native integration with Microsoft technology
- competitive pricing model
- reputation in the market for high-quality customer service and active collaboration with users

Result

- Peab's EA team uses OrbusInfinity daily to produce architecture deliverables for all of the organization's major group initiatives
- OrbusInfinity is regarded as Peab's single source of truth for its digital landscape
- The EA team supports the wider business in approaching change more systematically and improving decision-making

Having a single source of truth for EA facilitates collaboration within PEAB. OrbusInfinity has enabled us to break down siloed functions and improve decision-making across the business.”
