

CompTech

Challenge

CompTech, a leading consulting firm in Saudi Arabia, specializes in digital transformation, enterprise architecture (EA), and data management.

With a growing customer base of government organizations, CompTech needed a solution that would support these customers on their digital transformation journeys to align with Saudi Vision 2030 and The Digital Government Strategy.

Solution

CompTech uses iServer within its own operations and across its client base. Its user-friendly interface and customizable features allow for seamless integration, while fostering a collaborative environment for business and IT teams to govern the digital transformation journey and support decision-making.

iServer's on-premises licensing option also meets Saudi Arabia's data security and sovereignty requirements, which are particularly important for government organizations. iServer allows agencies to maintain control over their data within the nation's borders.

Result

- Streamlined government processes
- Application rationalization
- Improved alignment between business and IT
- Reduced operational expenses and IT complexity
- Enhanced data sovereignty and decision-making

iServer is a user-friendly, flexible tool, essential for guiding government agencies through their digital transformation journeys.”

Mohammed Yaseen

Principal Consultant for EA & Digital Transformation
