The Challenge

Rio Tinto Iron Ore (RTIO) is part of multinational metals and mining corporation Rio Tinto.

Like many businesses worldwide, RTIO wanted to:

- Better support its employees to do their jobs even more efficiently and effectively
- Improve the quality and timeliness of information
- Enable leaders to make better decisions, resulting in better business outcomes

The Solution

RTIO began using enterprise transformation platform OrbusInfinity, to meet these needs. Key features that support the company in achieving its goals include:

- Customization of objects, relationships, and use of out-of-the-box capabilities
- Easy access to information about job roles, processes, and responsibilities
- Interactivity between objects, relationships, and metadata

The Result

Using OrbusInfinity has enabled Rio Tinto to:

- Improve the way people work and collaborate
- Make more informed decisions around change management
- Surface insights to improve decision-making across the organization

Tyson Cable, Senior Business Architect at RTIO, plans to continue expanding and optimizing Rio Tinto's use of OrbusInfinity, in part due to the level of support he has received from the team.

"

All the people at Orbus Software are excellent. They provide very good support. They actively listen to the problems that we have, and they make clear communicated steps around how they will address those issues. We've had a lot of positive interactions that have led to us considering Orbus Software as a business partner."
