

The Internal Business Case for Application Rationalization

Application rationalization identifies and removes applications within an organization's portfolio that are redundant, risky, misaligned, or provide low business value.

Application Rationalization Timeline

Business Benefits

If an organization follows these steps, within four-weeks the C-Level can expect to receive the following benefits:

- A reduction in unnecessary costs across the IT estate
- Improved productivity and technology utilization through improved technology-business fit
- Elimination of high-risk/non-compliant technologies and the associated risk
